LIGHTING PEOPLE

REFLECT COLOR

“Reflect Color Studio is the ultimate lighting fixture for all your lighting needs”

Versatile Performance

Backlit Cyclorama, Key light, Backlight, Fill light, Set lighting, and Foot light – All effortlessly achieved with Reflect Color.

Compact Powerhouse

Reflect Color can be mounted almost anywhere and will appear very discrete in the studio ceiling. Despite of punching out up to 5500 Lumens of white light the 2-foot linear fixture weighs only 3,6Kg/7,9lbs.

From semihard to supersoft

Seamlessly transitioning from semihard to supersoft illumination, Reflect Color offers unmatched versatility in lighting design. At its core is a built-in color mixing chamber, meticulously engineered to deliver exquisite mixed color rendition. This chamber, paired with a steep silver-coated semi-diffused reflector, precisely sculpts a controlled semihard 100 x 60-degree beam, perfectly suited for the 16:9 format. Sliding in the included secondary diffuser transforms the beam into a circular 120-degree supersoft beam.

Real colors

Explore the sophisticated color capabilities in the richness of deep blue, the intensity of the double Deep Ruby Red, the lushness of medium green, and the purity of warm and cold white lighting options, meticulously calibrated for optimal performance and the richest skin tones.

A full Lighting system Compact and silent

Reflect Color is the latest addition to an ever-growing range of studio lighting products made by Brother, Brother & Sons and will fill in the blanks where full color Capability is needed in one product. As all the other BB&S product ranges CBL, CFL, Reflect Single and Bi-color products the Reflect Color is completely silent (no fans), compact yet powerful & built to last.

Control

The Reflect Color is fully controllable via RDM/DMX 512 and can be powered from 2 different sources; The Reflect Color 6-unit PSU or the Reflect Color DMX Lighting track PSU.

REFLECT COLOR SPECIFICATIONS

Power Supply 48V DC

- AC: 110-240V 50/60Hz
